### The patented non-spill system

The cap is completely closed while not in use, but biting down lightly on the cap opens it and allows liquid to flow out a little at a time. This structure has been granted a patent. It even allows for drinking while lying down. You are free to drink even at your bedside.

### No need to open and close

The cap is completely closed while not in use, but biting down lightly on the cap opens it and allows liquid to flow out a little at a time. Because suction is not required for drinking, there is no risk of aspiration.

### For your office

As "Kiss series" prevents from spilling, you can use it in various situations. You will be released from spoiling important documents carelessly.

### From children to elderly persons

You can drink easily. As "Kiss series" is a Universal Design product, everyone from young children to elderly persons can use it easily and safely.

### Simple care

You can use it repeatedly as washing it. Just turn it inside out, and every nook and cranny can be washed with ease. You can also disinfect in boiling water or by medication.

### Sure production in Japan

The material of "Kiss series" has passed inspection of the Food Sanitation Act. For safe and secure, "Kiss series" is produced at a factory in Osaka, Japan. As is harmless to the human body, it is often used for nipples of nursing bottles.

### Cautions!

- DO NOT use with hot drinks. It might cause a burn on your mouth, and unexpected spilling.
- DO NOT use with carbonated drinks. It might cause high pressure, and unexpected spilling.
- DO NOT bite strongly or stretch forcibly or stuff something into lip of Kiss. Because of the nature of the material, a small crack might cause split the body and break it.
- It might be apt to split when it gets old and elasticity becomes weak.
